ABOUT

Engineer and architect focused on creating exceptional user experience via web and mobile. Deep expertise on front-end technology with full stack breadth. Proven ability to balance big picture thinking while conceptualizing and executing project details. Energized by new technologies while possessing strong programming and architecture fundamentals. Strong technical leadership with a genuine interest in creating a collaborative and positive team atmosphere.

WORK EXPERIENCE

Principal Front-End Engineer, Advisory Board Company
April 2012 - Present

Technical lead for product development and platform initiatives. Advocate for UX and DX. Built strong and positive team cultures.

HIGHLIGHTS

- Authored MEAN stack and C# WebApi v2 solution for data platform project.
- Automated deployment processes with groovy, powershell, and nodeJS scripts in Jenkins and Bamboo.
- Wrote E2E and unit test suites.
- Created product analytics strategy recommendations and implemented them across product teams.
- Recommended and developed vendor relationships by working with security and legal to facilitate business agreements.
- Built several prototypes for NPD efforts.
- Created and led FEE 101, 201, AngularJS, and ReactJS trainings for the organization in Austin and Chennai.
- Created dependency-free C#/NodeJS build integration. Released internal and open source versions.
- Modernized legacy PHP UI with modern build tools and trained development team how to use them.
- Established open source policies and engineering blog processes.
- Formed cross product AngularJS team that created best practice and common code.
- Wrote close to 100 reusable UI components implementing company style framework.
- Co-organized and presented at Austin AngularJS meetup group.
- Mentored developers in Austin and Chennai.

UI/UX Architect, Tippr

August 2011 - April 2012

Established UI architecture for a daily deals company focused on scalability. Conceptualized product views and workflows through detailed wireframes and mockups.

HIGHLIGHTS

- Created and implemented architectural strategy that encapsulated UI as an application package that could stand alone or integrate into existing UI.
- Designed and implemented new architectural strategy for marketplace and calendar UI.
- Mentored other developers.

UI Engineer, Dell MessageOne

August 2011 - July 2008

Developed Web RIA UI for alerting SaaS and guided development team in Bangalore. Quickly integrated with development team and expedited several key features in RIA style web application designed to meet tight project deadlines. Accelerated product development by coaching Austin and Scottish teams.

HIGHLIGHTS

- Created mobile application prototype compatible with iPhone, Android, and Blackberry.
- Innovated and developed extensive library of reusable UI components.
- Provided code mentoring to the Bangalore Development Center through weekly conference calls and demonstrated code samples.
- Developed UI test automation framework and UI test automation framework.
- Developed several key extendable features in UI architecture such as search/sort/Iter, lists, and trees.
- Optimized UI performance by an average of 38% and refactored the codebase by over 100% in some instances.
- Created API documentation strategy integrating documentation generation into automated build process and coding best commenting practices.
- Enforced best practice code patterns in javascript by requiring implementation in extended code.

UI Engineer, QuantumDigital

July 2008 - June 2007

Developed web UI and improved internal workflows. Strengthened general UI expertise of team.

HIGHLIGHTS

- Streamlined marketing department's processes by integrating sales force with internal landing pages and survey results.
- Innovated new batching process that automated importing marketing templates built in Adobe Photoshop into internal company marketing tool in HTML compliant format.
- Modernized website menus and internal legacy forms.
- Migrated CVS Repositories to Subversion by implementing new source control workflow.
- Generated statistics from various data sources and presented results to executive team.

Web Developer, International Studies Abroad

June 2007 - May 2006

Brought focus to user experience and performed end-to-end development for public website and internal web applications.

HIGHLIGHTS

- Implemented website redesign in CSS from mockups.
- Extended functionality and consolidated base API framework.
- Increased content scalability by converting static pages to dynamically driven pages (total unique URL count increased from 35,000 to 150,000).

- Collaborated with site specialists to make series of internal web form improvements used to update website content.
- Conducted system analysis to determine the most user-friendly and efficient implementation of service API. Implemented recommended enhancements that reduced page load time by 66 percent and vastly improved speed of user interactions.
- Designed and implemented a new exible information system which allowed users to add information to the main website.
- Created new user interactions that enhanced user experience and resulted in 10-15x faster workflows in some cases.

SKILLS

Front-end Development

ES6/7 CSS2/3 HTML5 ReactJS AngularJS JQuery/JQueryUI

LESS/SASS CSS Grids Gulp Webpack ExpressJS

Design

Photoshop/Affinity Designer Balsamiq/Gliffy Responsive Mobile

UX Principles

Back-end

NodeJS C# PHP

Database

MongoDB Redis PostGres MSSQL ORMs Db Design

EDUCATION

Bachelor, Computer Science - University of Texas

2000 - 2005

AWARDS

Advisory Board Fellowship - Advisory Board Company

01 February 2016

The Advisory Board Fellowship is an annual cohort-based program for our firm's high-potential talent to foster recognition, leadership development, executive exposure, and networking.

Crimson FEE Hackathon Winner - Advisory Board Company

15 October 2014

Won company hackathon implementing a D3 visualization of JS complexity analyzer connected to a socket server running async NodeJS tasks that walked through source control timelines.
